My Site: Using One Drive

Microsoft's OneDrive for Business is a part of your "My Site" and offers you a generous 2GB of storage space. OneDrive acts like an extra hard drive that allows you to seamlessly share documents, images, videos, etc. with your work colleagues no matter where they are located.

You can also rest assured that the data stored in OneDrive is safe in our data centers and not stored in the cloud.

Here's how to get started using OneDrive:

-
1. From SunGard Central, go to the user menu (the link with on your name in the header menu) > select OneDrive.

Shared with Everyone

December 9, 2014

5. You can view files in any colleagues' "shared" folder. Even if you do not follow them, you can visit their "My Site" by using the search feature to search their name. Once you are on their site, click on Documents, and then open their "Shared with Everyone" folder to view what is inside.

The screenshot displays the OneDrive for Business interface. At the top, it shows "OneDrive for Business" and the breadcrumb "Documents > Shared with Everyone" for user "George Thomas". On the left, there is a profile picture of George Thomas and a navigation menu with options: "About George Thomas", "Blog", "Documents" (highlighted in orange), and "People". On the right, a file list is shown with a search bar "Find a file" and a magnifying glass icon. The file list has columns for "Name", "Modified", and "Share".

Hi Jane, pls have a look at the Presentation and let me know your thoughts...

- Paul

Send an email invitation

8. Below is a screenshot of the email your colleague(s) will receive, complete with a convenient link to the file you shared with the custom message. Also note that the follow button under the link makes it easy to FOLLOW the document and get automatic updates when it is updated in the future.

With its easy drag and drop functionality, OneDrive is a great alternative to using Secure File Transfer when sharing files internally with colleagues across SunGard. It's also the perfect option for sharing or keeping videos for purposes such as the [I Am SunGard](#) video contest.

Keep in mind that OneDrive is for internal use only. Secure File Transfer must be used when transferring information to vendors and others outside SunGard.

If you found this tutorial of One Drive for Business useful and want to see more tutorials like this, visit the [SunGard Central Community site](#) and start a discussion thread with category - tutorials.
